

LINTEX

AIR Whiteboard

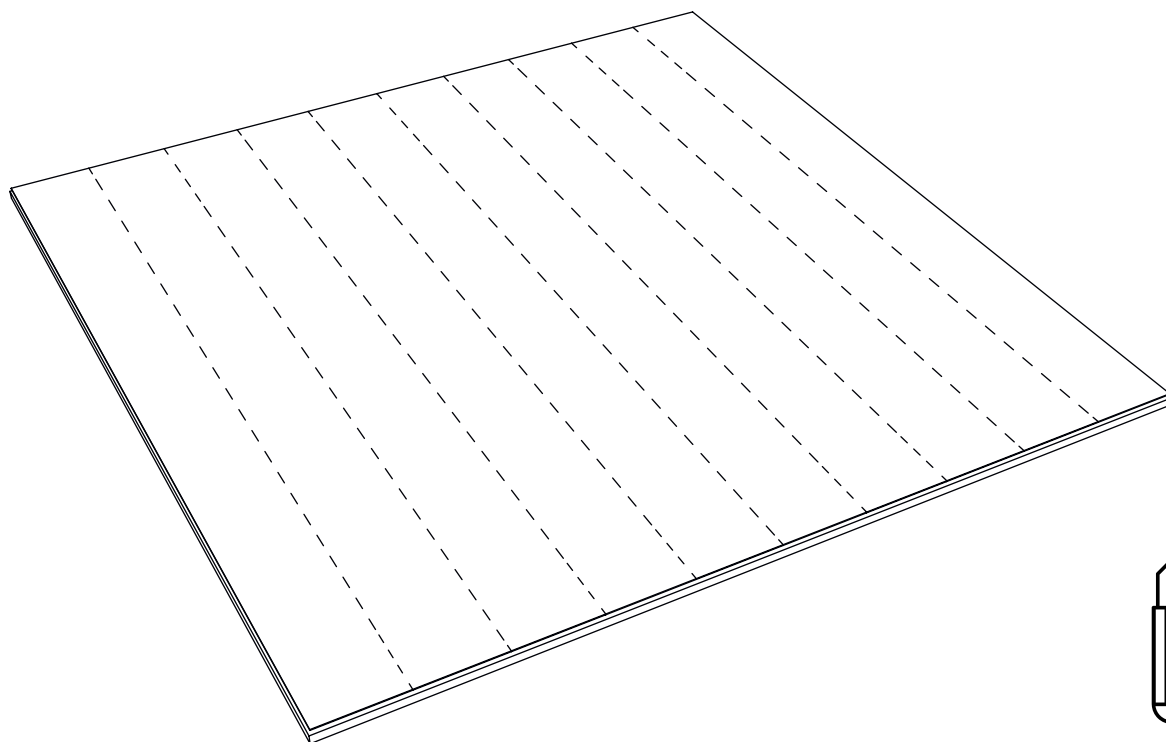

We make our products to last for a long time, and to be used over and over again.
But when they reach end-of-life, they should be demounted to enable material
reuse or recycling as far as possible.

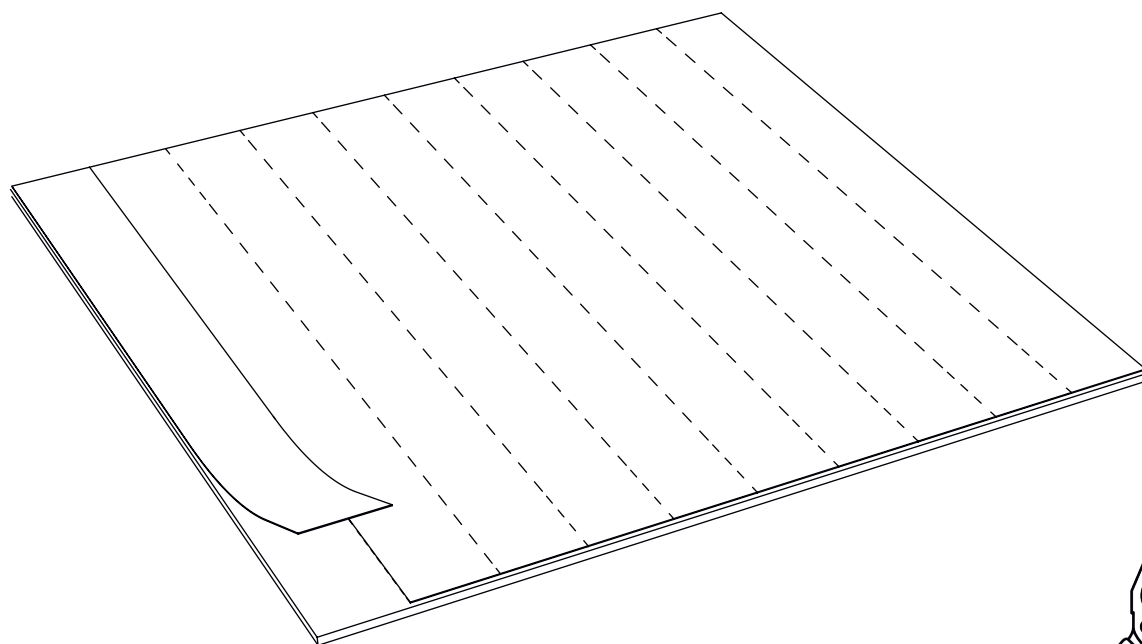

1. Remove brackets from wall

2. Remove brackets from whiteboard

3. Cut the aluminum foil on the back into strips

4. Remove the aluminum foil on the back using pliers

We recommend our clients to use the products for a long time and thereafter resell them to another user.

Spare parts (brackets) are available to prolong the life of the product. Contact us for requests.

When the product reaches end-of life, we recommend disassembly, where functioning parts are reused and the rest of the materials recycled according to national recycling systems.

The skill level required for disassembly is eather layman, professional or specialist
